

## **CORPORATE PROFILE**

### **INTRODUCTION**

With over 120 years of combined experience in carrying out business in Asia and the sub-continent headquartered in Hong Kong, Decorus Concepts Limited is dedicated in helping the environment and saving our natural resources. The Company sources and markets highly specialized environmental systems and products to businesses of all types throughout Asia and Australasia.

The motivation for this development was based on the recognized need to provide a professional approach to waste management and environmental protection within the Asia Pacific and Asian subcontinent regions, which together will show the greatest growth in populations and wealth creation in the coming decades.

The consumption habits of modern consumer lifestyles are causing a huge worldwide waste problem. Having overfilled local landfill capacities, many first world nations are now exporting their refuse to third world countries. This is having a devastating impact on ecosystems and cultures throughout the world, the most crucial threat being from climate change

We have the solutions!

### **AIMS**

Our aim at Decorus Concepts is to help countries, municipalities and large manufacturers to eliminate this waste and at the same time recover energy as a by product.

First reducing waste is in itself at best a long term objective. As countries become more developed the production of waste of many types increased at an exponential rate. Waste from households, commerce and industry mostly ends up in landfills where the biodegradable part generates methane (a potent greenhouse gas). At the same time valuable energy is used to extract and process new raw materials.

Decorus Concepts Ltd is currently working on waste to energy projects in:

- Korea
- Bangladesh
- Philippines
- Australia
- Macau
- Hong Kong
- China

Secondly to assist in the development and marketing of products which use significantly less energy than current counter parts, and are considerably more environmentally friendly when disposed of.

We are currently marketing the following eco-friendly products:

- 1) Energy saving lighting – LED
- 2) Biodegradable Food packaging
- 3) Valpak – biodegradable plastic bags

### **MISSION STATEMENT**

Decorus Concepts mission is to be a first choice partner to governments, businesses and private investors in environmental strategy, development & management and also a brand leader for consumer products and advice related to eco-friendly environments.

Our core strengths include

- Experts in reusable energy systems
- Experienced management consultancy team
- Energy reduction solutions
- International presence
- Highly experienced in marketing & PR
- Large regional client base
